

Project Title: Barber Shop Core Information Website

Introduction: As the owner of a new, community-focused barber shop, I require a definitive online presence to provide essential information to current and prospective clients. I am seeking a web-based solution that is professional, clear, and accurately reflects the brand and services of the shop.

Requirements: The website must prominently feature the shop's official **Location**, including the complete street address, city, and postal code. This should be accompanied by an integrated, interactive map (e.g., Google Maps) to simplify navigation for clients. A comprehensive **Pricing** and Service Menu must be clearly detailed. This section must list all available services (e.g., "Classic Cut," "Beard Trim," "Hot Towel Shave") with their exact prices. The shop's official **Opening Hours** must be clearly and accurately displayed for all days of operation, including any variations for weekends or specific days. This information must be easy for the owner to update in case of holiday closures or changes. A primary **Contact** section is required. This must include a verifiable business phone number and a professional email address for general inquiries. The visual design of the website (e.g., color palette, typography) must align with the shop's established branding and aesthetic.

Additional Expectations: The website must be fully responsive and function correctly on all modern web browsers, including mobile devices and tablets. The application must not include a reservation or online booking system; its purpose is strictly informational. All presented information (address, hours, prices) must be precise and free of errors. The website interface should be clean, intuitive, and load quickly, ensuring accessibility for all users.

Conclusion: I am looking for a scalable, professional solution that is easy for clients to use and serves as a reliable "digital front door" for the business. Accuracy of information, reliability, and a polished presentation are my highest priorities. If any of these requirements are unclear, please ask for clarification before development begins. Thank you for your attention to these details and for delivering a high-quality informational website suited to my shop's daily operational needs.
